

HomeWorks Tri-County Electric Cooperative
Schedule CH - Controlled Heating

Available to Member-Consumers of the Cooperative already taking monthly service concurrently under rate schedules A or B, for service to space heating loads, storage domestic water heating loads and associated air conditioning loads which are controlled by the Cooperative.

A Member Service Agreement is required for service under this schedule. To qualify for service under this rate, the portion of the Member-Consumer's load subject to control must be sub-metered off the master meter. Schedule CH, when combined with the net metering tariff, will result in a portion of the member-generated electricity being billed by the cooperative as controlled heating or air conditioning load.

Service is single-phase, or three-phase, 60 hertz, at available secondary voltage, and is governed by the Cooperative's Standard Rules and Regulations. Service is subject to service availability as follows:

Option No. 1 – Storage Heating

This option is available for electric space heating loads with sufficient heat storage capacity to withstand extended daily control of the electric supply. This option is also available to domestic storage water heaters. Domestic storage water heaters must have a minimum storage capacity of 100 gallons and a minimum heating capacity of 4,500 watts. Service under this option is available only between 10:00 PM and 6:59 AM.

Option No. 2 – Dual Fuel Heating

This option is available for electric space heating loads when used in conjunction with an alternate fuel heating system. The alternate fuel heating system must be capable of supplying the heating requirements of the Member-Consumer when the electrical supply is controlled. Service under this option is available for all hours except when controlled by the Cooperative. The number of hours when service is controlled shall not exceed 400 hours per heating season or 8 hours per 24 hour period.

Option No. 3 – Air Conditioning

This option is available for air conditioning loads when used in conjunction with one of the two options of controlled space heating load listed above. Service under this option is available for all hours except when controlled by the Cooperative. The number of hours when service is controlled shall not exceed 200 hours per cooling season.

Monthly Rate:

Energy Charge for Controlled Load, as set forth in Schedule A or B, whichever is applicable, including the Energy Optimization surcharge and Power Supply Cost Recovery provision. The rate for this service will be \$0.03 less than the rate for energy currently in effect.

Terms of Payment and Tax Adjustments:

- A. This rate schedule is subject to the terms of payment as set forth on the concurrent rate schedule that qualifies the Member-Consumer for service.
- B. Bills shall be increased or decreased, within the limits of political subdivisions which levy special taxes, license fees or rentals against the Cooperative's property, or its operations, or the production and/or sale of electric energy, to recognize such special charges and thereby prevent other customers from being compelled to share such local increases or decreases.
- C. Bills shall be adjusted to reflect any new, increased, or decreased specific tax or excise imposed by any governmental authority which impacts the Cooperative's cost of providing electric service.
- D. Michigan state sales tax shall be added on all bills, where applicable.
